

Innovative software solutions through powerful business analysis

Success in software solutions

At BMT we provide expert advice and bespoke software solutions for all kinds of organisations. We offer a broad range of services including information management, application development and through-life system support – and our portfolio continues to grow.

Above all, our team of highly experienced engineers, business consultants and developers understand the commercial environment and challenges our clients face. This means we're able to offer technical support management and in-depth business analysis that is firmly focused on practical results. It's our goal to keep our business partners right at the cutting edge of their industry.

Software development and support

We deliver independent, trusted information and software solutions for a range of organisations, from the UK Ministry of Defence to government bodies and commercial companies. Our experienced consultants and developers understand your needs early on, so they are able to meet your requirements and exceed expectations.

Working in partnership

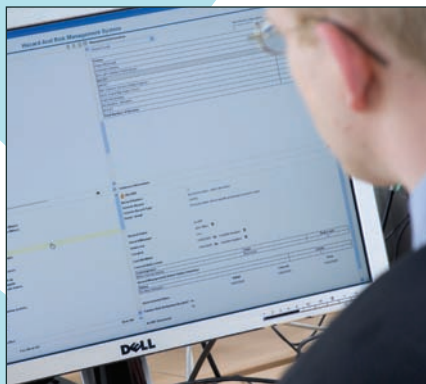

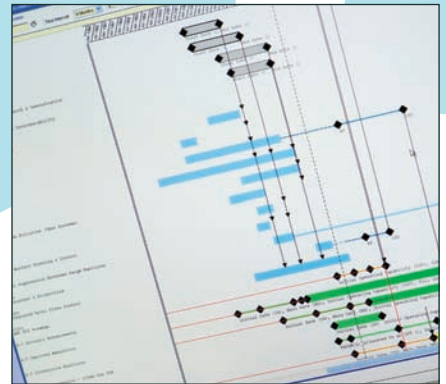

Over the last 20 years we have built strong, long-term relationships with customers from a variety of industries. To us, success is rooted in partnerships and, by truly understanding our customers' needs, we are able to deliver the technologies and performance they need – in the most cost effective and efficient way possible.

Backing up businesses

We combine project management expertise with the latest software technologies to provide bespoke applications across many industries. We deliver state of the art systems, designed to suit each particular customer – where there is a problem with an existing system, we address the whole issue and provide on-going support.

Following the software lifecycle

Our structured approach to software development puts our customers' needs at the heart of the process. Whether we're capturing and analysing customer requirements, producing a prototype, system testing or providing ongoing maintenance and support, we tailor each stage of the software lifecycle. Even if we are only involved in the later stages, we assess the requirements and risks of each project individually, to ensure customer satisfaction.

Insight and knowledge

We don't just develop and manage software – we focus on the big picture. Our experienced engineers and business consultants are continually researching new techniques and providing efficient solutions to our customers. Our reputation depends on our engineering and information expertise, so we go further to develop highly integrated systems based on specialist understanding.

Information management consultancy

Our team of consultants have the relevant industry experience to assess your needs and communicate with people at all levels. This understanding of the business environment allows us to cover specific areas of information management, including:

- Comprehensive requirements capture and analysis
- Business process modelling
- Project management
- Information architecture

Application development

We manage the entire software lifecycle from requirements capture and analysis to design, development, deployment and support. Using PRINCE2 and ITIL practices, we are able to provide comprehensive solutions. This means that 80% of our customers come back to us, confident in our ability to manage all aspects of their software development.

Platforms

Our systems can be used on multiple platforms from internet and extranet to client-server architectures, mobile devices and secure private networks such as the UK's RLI; for instance Apache helicopter pilots' situational awareness has been improved by using an innovative PDA-hosted application we created.

Technologies

With applications over the internet becoming more powerful, it's now easier than ever to benefit from instant access and a single consistent interface to your data. With the latest technology from our software development team, and with no distribution involved, maintenance and through-life support costs are reduced.

Our current technologies, including ASP, Net, AJAX, XML, JavaScript and Adobe Flash among others, allow efficient communication between browser and server, to keep you up to date with the latest web applications. We can deliver graphically rich content, live information with no client footprint.

Systems integration

Drawing on information from multiple data sources or platforms including legacy systems, web services, mobile devices or specialist real-time monitoring equipment, we can find the right solution for your business needs.

Systems approach

Our object-orientated approach, combined with the application of technologies, allows us to deliver professional, integrated solutions time after time. ISO 9001:2000 and TickIT QA standards, and Investor in People principles underpin the solutions we provide.

Network design and security

Working on some of the latest defence projects, we understand that there is no room for error. Our specialist network and security consultants provide a managed and secure working environment for users with HMG Infosec Security.

Training

Our bespoke packages include on-site classroom training, interactive web training and downloadable Flash walkthrough training. We adapt to our customers' schedules and needs, so whether you'd prefer one-to-one or online tuition, you learn at your own pace.

Research and development

We are continually looking for new ways to improve efficiency and challenge limitations. Many of our commercial off-the-shelf products have been developed through investigating new, more efficient solutions for our customers. TeMAP – Technology, Management, Acquisition and Planning – is a project management tool which was developed specifically to allow customers to assess the suitability of particular future technologies against projects over time.

Delivered by outstanding people

BMT has been providing quality software solutions for over 20 years and operates internationally in the following markets:

- **Commercial**
- **Defence**
- **Environment**
- **Energy**
- **Transport**
- **Risk and Insurance**

Our consultancy teams comprise of systems analysts, engineers and developers with a breadth of experience and skills gained across a variety of markets.

We provide a total software capability across the full software life-cycle, producing elegant and innovative solutions within budget, minimising through-life maintenance and support costs.

Customers depend on our understanding of their business requirements so we can produce information systems enabling them to make the right decisions.

Born from a government research and development facility, our innovative approach and creative thinking supports customers in achieving their business objectives.

BMT Group

BMT Group is an international design, engineering and risk management consultancy, working principally in the defence, energy and environment, marine risk and insurance, maritime transport and ports and logistics sectors.

BMT invests significantly in research. Its customers are served through a network of international subsidiary companies. The assets are held in beneficial ownership for its staff.

Working with BMT

We bring unrivalled experience, expertise and dedication to each project. Thanks to our professional engineers and business consultants, we are able to pool knowledge and provide specialist support to our clients at every stage – achieving exceptional results and continually increasing our portfolio of services.
